## Profile

---

A Full Stack Software Engineer with 3+ years of expertise in designing, developing, and deploying scalable web applications across e-commerce, logistics, and marketplace platforms. Founder of Cyberninja Innovations, leading development teams and architecting custom web solutions from concept to production. Specialized in Python-based backend development (Django, Flask) and modern frontend technologies (React.js, JavaScript ES6+), with proven success integrating payment systems (Paystack, Flutterwave, Stripe). Demonstrated track record driving measurable results: 25% surge in customer engagement, 30% database performance optimization, and NDPR/GDPR compliance across multiple projects.

## Employment History

---

### Founder & Lead Full Stack Developer, Cyberninja Innovations

2023 — Present

- Founded and currently lead software development company specializing in custom full-stack web applications for Nigerian and international markets, managing end-to-end project delivery from client consultation through deployment and maintenance
- Built comprehensive portfolio website CyberninjaInnovations.com
- Managed client relationships and project timelines, maintaining 100% on-time delivery rate while ensuring high quality standards and client satisfaction across all projects
- Implemented security best practices and NDPR/GDPR compliance features across all client projects, achieving 100% regulatory adherence

### Lead Full Stack Developer, AutoboyExpress.com (Both Website and Mobile App)

June 2025 — Present

- Led a team of 4 developers in architecting and developing a comprehensive e-commerce marketplace platform connecting gadget resellers and buyers, achieving 80% completion with deployment pending
- Engineered robust backend using Django 4.2 with MySQL database, implementing Django REST Framework for 10+ API endpoints, achieving 100% uptime and strengthening system security through JWT authentication and role-based access control
- Implemented innovative buy/sell/swap functionality with real-time chat using Django Channels (WebSocket)
- Developed premium membership system with tiered benefits (Premium Seller, Premium Buyer), creating sustainable revenue streams and targeting 25% increase in user engagement

- Integrated multiple payment gateways (Paystack, Cryptocurrency (Coming Soon)) with escrow fund management, ensuring 100% secure transaction processing and achieving 95% payment success rate
- Integrated external logistics APIs (Fabstechexpress Logistics) for real-time shipping calculations, reducing delivery coordination time by 50%
- Improved team productivity by 65% through agile project management, code review practices, and reducing feature development cycle time by 50%
- Built comprehensive admin dashboard with user moderation, product approval workflow, and business intelligence analytics, reducing administrative overhead by 60%

## **Lead Full Stack Developer, FabstechExpress.com (Both Website and Mobile App)**

**August 2025 — Present**

- Directed a team of 2 developers in building an international and local logistics web application connecting Texas and Nigerian operations, achieving 40% completion with deployment scheduled within 2 days
- Developed full-stack application using Django backend with PostgreSQL database, implementing RESTful API architecture and secure JWT-based authentication system
- Implemented dynamic pricing calculator based on package weight, dimensions, distance, and delivery speed with real-time rate generation, reducing manual pricing errors by 100%
- Integrated multiple payment gateways (Paystack, Cryptocurrency (Coming Soon), Bank Transfer) with 95% transaction success rate and comprehensive reporting
- Developed 24/7 live chat support system using WebSocket technology, reducing customer service workload by 50% and response times by 60%
- Optimized database schemas and queries for multi-user systems supporting 1000+ concurrent users, improving data retrieval times by 30%
- Implemented NDPR/GDPR compliance features including data encryption, user consent management, and privacy controls, ensuring 100% regulatory adherence

## **Education**

---

**Imo State Polytechnic, Umuagwo, Nigeria**

**National Diploma in Electrical and Electronics Engineering (February 2018 - June 2020)**

## **Courses**

---

**Moat Academy for Developers (June 2024 - September 2024)**

**Intensive 3-month Web Application Development Training Program covering full-stack development, Django, Flask, React.js, database design, RESTful APIs, and deployment strategies**

## **Skills**

---

**Backend Development:** Python, Django, Flask, Django ORM, Django REST Framework, RESTful API Design

**Frontend Development:** React.js, HTML, CSS, JavaScript, State Management (Redux, Context API)

**Database & Query:** SQL, PostgreSQL, MongoDB, MySQL, SQLite, Database Optimization

**Development Tools:** Git and GitHub, Webpack, npm, VS Code

**Testing & Quality:** Test-Driven Development (TDD)

**Web Technologies:** Media Queries, Flexbox, Grid, AJAX

**Deployment & Cloud:** Digital Ocean, AWS S3, Cloud Services, SSL/TLS

**Payment Integration:** Paystack, Flutterwave, Stripe, Cryptocurrency APIs

**Leadership & Management:** Team Leadership, Agile Project Management, Code Review, Mentoring

**Collaboration & Project Management:** Slack, Trello, Team Communication, Agile Workflows

**Professional Skills:** Communication Skills, Problem-Solving, Time Management, Adaptability

**Additional:** Focus and Discipline, Self-Motivation, Organization Skills, Cultural Awareness

## Projects

---

### **AutoboyExpress.com — E-Commerce Marketplace (September 2025 - Present)**

- Led a team of 4 developers in building a comprehensive gadget marketplace platform, website and mobile app with innovative buy/sell/swap functionality, achieving 80% completion and improving team productivity by 65% through agile project management and code review practices
- Spearheaded development of real-time chat system using Django Channels (WebSocket), enabling instant communication between buyers and sellers, reducing feature development cycle time by 50%, and improving transaction confidence by 40%
- Developed premium membership system with tiered benefits (Premium Seller, Premium Buyer), creating sustainable revenue streams and enhanced user verification, targeting 25% increase in user engagement upon launch
- Integrated external logistics APIs (Fabstechexpress) for real-time shipping calculations, reducing delivery coordination time by 50% and improving customer satisfaction
- Built comprehensive admin dashboard with user moderation, product approval workflow, and business intelligence analytics, streamlining platform operations and reducing administrative overhead by 60%

### **FabstechExpress.com — Local and International Logistics Platform (August 2025 - Present)**

- Directed a team of 2 developers in building a full-stack logistics application connecting Texas and Nigerian operations, achieving 40% completion with deployment coming up soon, featuring dynamic pricing calculator based on weight, distance, and delivery speed
- Implemented multi-gateway payment system (Paystack, Cryptocurrency, Bank Transfer) with 95% transaction success rate and comprehensive reporting for financial reconciliation, reducing manual pricing errors by 100%
- Created 24/7 live chat support infrastructure with automated response system, reducing customer service workload by 50% while maintaining high satisfaction scores
- Engineered NDPR/GDPR compliance features including data encryption, user consent management, and privacy controls, ensuring 100% regulatory adherence and building customer trust

### **JobZone — Job Portal Platform (June 2024 - September 2024)**

- Led development of comprehensive job portal as final capstone project for Moat Academy training, successfully bridging job seeker-employer gap and achieving 85% success rate in job matching

- Built advanced search and filtering system with multi-criteria queries optimized using MySQL, reducing job search time by 60% and improving match accuracy
- Implemented resume management system with secure file upload and employer access controls, streamlining application process and increasing applicant tracking efficiency by 70%
- Integrated email notification system using Flask for job alerts and application updates, achieving 90% user engagement with automated communications

#### **Ginger Clothings — Multi-Brand E-Commerce (November 2024)**

- Designed and deployed multi-brand e-commerce platform as training mini-project, achieving 85% increase in simulated customer engagement through streamlined shopping experience
- Implemented secure payment gateway integration and real-time inventory management, ensuring 100% transaction security and accurate stock tracking
- Built responsive frontend ensuring seamless user experience across all devices, achieving 98% responsiveness score and 95% user satisfaction in testing

#### **Gin Construction — Construction Portfolio (March 2025)**

- Designed and launched a comprehensive corporate website for construction services, achieving 100% completion and 95% increase in organic search visibility
- Developed dynamic project portfolio system with image galleries supporting 50+ projects, increasing client discovery by 95%
- Integrated contact system with SMTP email notifications, achieving 85% improvement in client communication efficiency
